

CITROSKID

Complementary feed. Contains *Yucca schidigera* and a mix of citrus fruits extract from Citrobex®

LIQUID
WATERSOLUBLE

- Contributes to the physiological intestinal function (also in conjunction with problems from flagellated microorganisms) especially in young animals thanks to the *Yucca saponins*.
- Continuous use contributes to the compactness of the faeces and support the nitrogen metabolism helping to keep litters dryer and less odorant.
- Includes Citrobex® with a fruit mix ingredient with antioxidant effect to neutralize free radicals.

CONTAINS

Yucca schidigera

Saponins in the butane extractable fraction have several effects on metabolism and animal production (Killeen et al., 1998; Cheeke, 2001; 2006; Piacente et al. 2005), including:

- **Nitrogen metabolism** control and odour reduction
- Support to **normal** nonspecific **immune response**
- **Membranolytic effect**: saponins can make a complex with membrane cholesterol from some protozoa, causing cell lysis.

Citrobex® from a mix of *Citrus spp.* extract

The main ingredient of **Citrobex®** is obtained by cold extraction from the whole fruits mix of *Citrus aurantium L.*, *Citrus aurantium bergamiae* (Bergamot), *Citrus reticulata* (Mandarin) & *Citrus sinensis* (Orange)

The technique allow the natural **polyphenolic compounds** (mainly **Bioflavonoids**) to maintain their natural properties (antioxidants and antimicrobials) to support a proper gastrointestinal microbiota,

RECOMMENDATION FOR USE

Categories	Quantity	Use on continuous or cycles
Piglets	1-1.5 ml/l of drinking water	<p>Start as early as possible in the young age of the animal or to contribute to proper intestinal function.</p> <p>Continue for 7-10 days.</p> <p>Can be used for long periods.</p>

Packaging:
5 l plastic tank
10 l Bag in box
