CONTAINS

Meliaceae Vegetable oil
(including *Azadirachta indica* or Neem,
Carapa guianensis or
Andiroba)

The anticoccidial activity of some plant species of the subtropical plant family, Meliaceae, is well known in the scientific bibliography (Affian, 2017).

Azadirachtin is a triterpenoid from of the class of limonoids, found in the *Azadirachta indica* trees and noted for blocking of cell proliferation and RNA synthesis (Fritzsche, 1987; Salehzadeh, 2003) at the cellular level in **actively dividing cells**.

Natural extract
of *Allium sativum*

Vegetable extract obtained by cold maceration of plant in hydroalcoholic solution.

Natural extract
of *Thymus vulgaris*

Extract obtained by extraction of the dried plant using a solution of water-glycerine.

RECOMMENDATION FOR USE

Mix the product into the daily ration. Use higher amounts for animals with reduced intake. It is strongly recommended to administer **continuously** throughout **from the early age** until all the critical period to ensure the sufficient intake of ingredients.

Species	Quantity mixed to the complete feed	Use
Cattle (calves and heifers)	5-20 g/head/day	Start as early as possible for at least 4-8 weeks. It can be used for long periods.
Sheep and goats	1-2 g/head/day	

Packaging:
20 kg bag

It can be administered as 'ready-to-use product', mixed into the final ration or processed in the pelleting procedure.

For uses with heat treatment is recommended to increase the quantity by 30%
